Description Cut 1D X is a powerful automation component used for obtaining optimal cutting layouts for one dimensional pieces. Cut 1D X can be used for cutting linear pieces such as bars, pipes, tubes, steel bars, or any other material used by industrial applications. Cut 1D X is a software that helps you cut layout. Cut 1D X can be used within any programming enviroment such as Delphi, C++Builder, Visual Basic, Visual C++ etc. Cut 1D X Description: HTML CODE Cut 1D X FAQ What is an XML web service? An XML web service is a very powerful software technology that provides an automated way of importing/exporting data. You can setup your own web service in minutes and your application will use it automatically. How do I configure a web service? You need to configure your web service in order to set the XML document to export or import. By default, Cut 1D X web service will process only the high-level parameters. For example, if you have a user defined item with all of the information you need to export the file, Cut 1D X will only process the default parameters. The Cut 1D X web service will export a package for you. To export the package, you have to open the package file and select the table that you want to export. You can also add more tables to the package. Once the package is open, you can save it and close it. To export multiple packages, you can use multiple packages. You can specify the parameter names in each package. It's very easy to export all of the packages at once. There are two ways to import the data: Import each file one by one. Import the multiple XML files all at once. How do I import a package? To import a package, you first need to open the package file. You can open the XML package file from several places: In the item you want to import. From the item tree. In a spreadsheet (Example: Excel), you can select the package in the Excel file. Open the package file. Select the top of the package. Select the table you want to import. Once the package is open, click on the Import button. If you

- Cut 1D X is a convenient, simple and powerful tool for cutting linear pieces, such as bars, tubes, pipes and steel bars. - It can be used in conjunction with any other types of generation component, such as those used in other Microworks generators. Cut1d X has been designed with the idea of automating the process of generating an optimal cutting layout. - Optimized for cutting linear pieces. - Supports any type of material. - Supports all types of programming language. - Allows for infinite inputs to be calculated, optimally. - Automatic optimization of any type of cutting layout. - Supports advanced techniques to achieve the best possible result from your cutting. - Allows for parallel processing (multi threads). - Supports various platforms such as Windows, Linux, iOS, etc. - Supports various programming languages such as Delphi, C++, C#, Visual Basic, Visual C++ and others. - Supports several different types of materials such as materials used in welding, steel materials, carbon materials, etc. - Allows for unlimited inputs in any direction. - Allows for line segment along the cutting path for deactivating the automatic generation of the cutting layout. - Allows for creating the cutting layout for multiple pieces. The user interface of Cut 1D X is as simple and intuitive as possible. One or more lines are inserted into the dialog and selected. The end point of the line can be on the form of the dialog. The dialog box is then fully filled in. The dialog box is then displayed. - The dialog box can be resized in proportion to the window and dialog boxes. Cut 1D X features - A dynamic user interface that is fully adapted to the selected input parameters. - Quick and easy integration with other Microworks components. - Maximum compatibility with the various programming environments (Delphi, C++Builder, Visual Basic, Visual C++ and others). - The interface supports any type of material, any type of programming language, etc. - Allows the user to create the cutting layout for multiple pieces simultaneously. - Support for infinite inputs in any direction. - Allows for line segment along the cutting path for deactivating the automatic generation of the cutting layout. - Supports processing of cutting layouts of any magnitude in any direction. - Supports parallel processing of the program. - Allows the user to select the output orientation of the object (right

Use the powerful cut layout for one dimensional objects. It is capable of cutting bar and pipe materials, but also plates and similar 1D objects. Cut 1D X can be used as a standalone tool for many situations, but with the functionalities that the stand alone tool provides, it can be upgraded to an ideal automation system. Cut 1D X can be used as a standalone design tool, to calculate optimal cutting layouts for engineering design software. Cut 1D X is often integrated into CAD systems for cutting stock thicknesses and sizes. Cut1D Professional is an automation system for all designers, makers and engineers. The program provides you with extremely powerful automation tools: Cut Off Capacity and length can be cut off or reduced. The system takes exact measurements and calculates the volume that needs to be cut. Cut Selection Cut selection provides the highest quality cuts. It can also create great cutting layouts, assisting in the usage of a material in maximum efficiency. Cut Placement The program provides a powerful and efficient cut placement. What was impossible just a few years ago now possible with this software. Review Press Release Cut1D - A Powerful Automation Tool to Calcuate Cutting Layout for 1D Objects Cut1D, a powerful automation tool for cutting Cutting layouts are only possible if you know the exact size and shape of the object. Cut1D makes it possible for you to automate the cutting of one dimensional objects by measuring the exact dimensions and sizes. The software is very easy to use. With Cut1D you can design accurate, high quality cuts that are easy to apply. This software makes the usage of the product easier and more powerful.The software will calculate the exact cuts of different products that you want to cut. Cut1D and IsoD create the necessary area for cutting.Cut1D can take exact measurements of the products and calculates the required length for the desired cut. Cut1D is not just a standalone design software.You can expand the design layout to a simple cutting tool.For example a single corner can be removed as a cutting cut. Automation solution for a broad range of industrial processes Cutting layouts are only possible if you know the exact size and shape of the object. Cut1D makes it possible for you to automate the cutting of one dimensional objects by measuring the exact dimensions and sizes. The software is very easy to use. With Cut1D you
