The Architecture section of the Building & Planning section of our website provides a detailed overview of the architectural applications of AutoCAD. Building a house is hard work. Consider the engineers who spend days designing a building while guiding it safely to its ultimate location. As the owner, architect, and contractor—and often, architect/contractor—there are a lot of things to think about. For example, the roof, windows, doors, plumbing and wiring must be constructed to meet building code, fire regulations, and other requirements. By using AutoCAD, the architecture and drafting sections of our website can help you get a good start on building your own house. In fact, we believe this is the most useful and important AutoCAD tutorial on our website. The Construction section of our website includes a series of articles that will help you create a floor plan and a 3-D model of your home. These guides will show you how to create a basic construction drawing from scratch. Finally, the Public Works section of our website shows you how to complete architectural drawings for landscape projects. This tutorial covers how to work with AutoCAD in a landscape setting. In addition, the Construction and Public Works sections of our website provide step-by-step guides to various AutoCAD features, including: Drawing sections, floors, walls, and roof lines in 2-D and 3-D views Drawing columns, beams, and slabs Creating and drawing boundary lines Creating and drawing doors, windows, and symbols Creating and drawing interior and exterior details Creating and drawing grout lines Creating and drawing roof lines Creating and drawing planters Creating and drawing a top view Creating and drawing a profile view Creating and drawing a side view Creating and drawing a floor plan
