Set up your smartphone's photo printing If you decide to use your smartphone to make prints, you need to be able to locate the printer, connect it to your computer, and print from that device. First, make sure your smartphone and computer are connected to the same wireless network. (To help you get the best possible connection, I like to use an ethernet adapter for my computer. An adapter can cost less than $20.) To print from your smartphone, you must first create a shortcut to your printer on your phone. After you set up a shortcut to the printer and login to it, you can print an image from your smartphone.

The two cells will be invisible until user taps on a cell or touch anywhere of screen. Is it possible? A: You cannot have two cells on the same row.
