Guided defragmentation Defragment those hard drives you have lying around, those with a lot of data on them, or those that are older than a year. Ashampoo Magical Defrag is just the tool for that. Manually defragmenting drives is not so fun, and it often results in performance losses or data loss - but Ashampoo Magical Defrag does that too. Take care of data that is worth more than the time you invest in defragmenting them. With Ashampoo Magical Defrag you will be guided through a two-step process. In the first step, you let the defragmentation work for you. In the second step, you analyze the status of your hard drive, or the results of the defragmentation. You can also initiate a manual defragmentation. The latter option is for those situations where there is simply no defragmentation going on, or when you want to break it. These situations are not common, but here we will explain them in more detail: Delete files Hard drive or external hard drive on the process In either case, it is a normal behavior of the Windows file system. Each of the files has a different status, and you have to choose the best options to defragment your drive. This option is for when you use the hard drive or external hard drive as a sort of shadow (or virtual) drive. Do not defragment on your current drive Here you will find the normal status of a hard drive. This option will significantly improve the performance of your system and prevent defragmentation from clogging up your hard drive. Hard drive is mounted as Windows file share You are looking at a safe method of defragmentation. This option will prevent you from defragmenting important or confidential files. This option is generally advised for external hard drives, which are often used as a safe storage area. Start defragmentation This will give you the opportunity to start a manual defragmentation. To initiate, click the Start button in the window that pops up. Delete multiple files Multiple files with the same status can be deleted by applying the "Delete all" option. Use this option when you have deleted a file but still want to defragment its hard drive. Reduce drive fragmentation Even though you are not defragmenting or improving the performance of your drive, you can choose to reduce its fragmentation by using the "Reduce drive

What's New in the Ashampoo Magical Defrag?

What's new Version 2013.11 (new). Areas of application: Ashampoo Software PC TuneUp Optical Drive Performance Full Disk Defrag Defrag Defragment Disk Cleanup Disk Startup Manager Data Optimizer Optical Drive Optimizer System TuneUp PC TuneUp Optical Drive Optimizer The software is a fully functional defragmentation tool for your Windows computer. The application has been developed with Microsoft.NET Framework 4.0 and compresses files to reduce the size and thus saves disk space. This program does not make the hard drive any worse, but only makes disk-free space more accessible. The programs defragment your hard drive in a very simple way and are ideal for both beginners and experts. There are few features for all beginner and experts. This is a freeware. A license is included in the download. The software is a full-featured defragmentation tool for your Windows computer. Its graphic and clean interface makes it a breeze to use, even for inexperienced users. It defragment your hard drive with one click. Have you ever wondered how defragmentation works? Well, defragmentation is the process of compressing all files on the hard drive so that the free space on the disk is available to be written over. This is the only way you can improve the performance of your hard drive as a whole. If you have ever defragged before, you probably noticed that the defragmented files might not appear on the desktop. That's because Windows usually defrags larger files from the back end of the drive. To make sure it works, Ashampoo Defrag

compares files after the defragmentation. If it finds large differences in their sizes, it checks the different reasons and suggests the appropriate action. In addition to the regular defragmentation, this software offers two other tasks. The Cleanup feature removes temporary files and the Startup Manager automatically defragments your hard disk when the computer starts up. You can select each of these features by clicking the individual item in the main window. The essential features include: - Automatically defragment files: A program that automatically defragments files to optimize the hard drive. - Support for removable hard drives: - Cache: The on-board memory to temporarily store frequently
