DOWNLOAD THE RECOMMENDED VERSION OF ReProfiler FOR WINDOWS ReProfiler is a lightweight solution to reassigning Windows user profiles that were detached from their afferent domain account. The software can easily detect the user profiles folders and display the existing accounts, in order for you to create the correct connections. A quick solution to Windows user - account

detachment Recent versions of Windows might encounter a problem that causes the loss of access to the data and settings of a specific user. There are several motives that can generate this problem, including a disk error, joining or disjoining your computer to/from a domain or transferring the data to a new system. Additionally, changing the username can also cause its detachment from the domain

account. The result is that Windows cannot recognize the profile as belonging to a specific user, and blocks their access to the account and all the local settings. Fix the broken user - profiles assignments When you try to access a wrongfully assigned or detached user, the system can automatically create a new account, but does not import your settings and preferences. ReProfiler offers you the means to fix this error,

by assigning the correct user profile to the right account. The software can detect profile folders and domain accounts, displaying them separately, in two tables. You can select one of each, then create an assignment. The software performs several checks, in order to determine if the assignment is appropriate, then searches for the user's SID. Additionally, it can change the user's attributes, in order to

create a new trusteeship and associate it to the user's registry hive. Testing connections and reassign user profiles to certain accounts You can select a profile folder name and a domain account, then click the Test button, in order to check their compatibility. Simply enter the password and let the software perform a logon test. This step is informative, since it only simulates the software's main function.

ReProfiler is simple to use and does not require advanced knowledge regarding user - account configuration. It represents a reliable solution to problems caused by user profile
