torrentQ: Using R to read  
Excel files (.xlsx) and  
output data into  
separate.csv files

Background info: this  
question stemmed out of  
following this previous  
question - Retrieving data  
from a.xlsx file in R

The.xlsx file in the  
previous question has been  
replaced by a.csv file in the  
present question, but the  
same principles remain the

---

same. I have a small amount of code in R, using the openxlsx package and it runs through the code fine. The following code is what I have to input a fixed filename into R. This works fine and the read command outputs data into the new worksheet, but then i have to go through the separate set of worksheets by using Select worksheets. e.g.

---

xlsfile\_4.csv is the file name of one of the worksheets I have tried using the paste function to gather up the information from all of the other worksheets, but that still works fine (outputting to.csv files) but is unnecessarily long and repetitive. Is there a way of combining all of the worksheets into one separate output csv file, as

---

the original.xlsx file had  
only three sheets? Try 1:
